Portfolio: siya23-maker.github.io **GitHub:** github.com/Siya23-maker **Based:** South Africa (UTC+2)

Profile

Final-year **Computer Science and Application Development** student at Emeris with a **Higher Certificate (with distinction)** in Mobile Application and Web Development. I build full-stack web and mobile apps end to end: **Flutter and Android** front ends, **Node.js and .NET APIs**, and the databases behind them. I have **led a development team**, owned a production API and delivered a live website for a real client. Ready to start immediately on a remote team.

8
projects built across web and mobile

102
automated tests passing on HustleHub+

3
stacks: Flutter, MERN and .NET

Key projects

Reggy — Smart registration app for Emeris

LEAD DEVELOPER

Lead developer · Full-stack (front end and back end)

- Led the team brought in to make the Emeris registration system smarter: set the technical direction, split the work and kept delivery on track.
- Built across the full stack, from the Flutter screens to the back-end logic and data models.
- Delivered progress tracking, document uploads, a scannable QR student ID, campus navigation and an AI assistant.

`Flutter · Dart · Material Design · QR codes`

Impilo — Mental health companion app

API OWNER

API developer · Designed and built the API

- Owned the API behind the app's goals, tasks and supportive AI chat.
- Connected the app to the API so goals and tasks stay in sync across every screen.
- Hosted the API on Railway; GitHub Actions CI builds the app on every push.

`Android · REST API · Railway · GitHub Actions · Gradle`

HustleHub+ — Secure freelancer marketplace

TEAM PROJECT

Full-stack developer · Database and back-end layers

- Set up the MongoDB connection and built the back-end service layers on top (routes → controller → service).
- Gig booking with simulated payments and income tracking in ZAR, secured with JWT, bcrypt, role-based access, rate limiting and Helmet headers.
- Quality: 64/64 back-end, 38/38 front-end tests and 95 API assertions passing with 0 failures.

`MongoDB · Express · React · Node.js · Jest · Vitest · Postman`

Technical skills

LANGUAGES
Dart · Kotlin · C# · JavaScript · TypeScript · HTML/CSS

MOBILE & FRONT END
Flutter · Android · React · Vite · Flame

BACK END & APIS
Node.js · Express · ASP.NET Core · REST APIs · JWT auth

DATABASES
MongoDB · SQLite · EF Core

DEVOPS & CLOUD
Git · GitHub Actions · Docker · Railway · AWS · Azure

TESTING
Jest · Vitest · xUnit · flutter_test · Postman · Newman

Professional skills

- Project management
- Strategic planning
- Technical leadership
- Team coordination
- Requirements analysis
- Client communication
- Problem solving

● Ready to start now
Remote, flexible hours, happy to work across time zones.

More projects

Smart-X Detecto — Real-time sensor management

FULL STACK

- Built a system where every sensor reading is queued, prioritised, stored and acted on in real time.
- ASP.NET Core MVC + Web API back end driving an animated fish simulation (Smart-X AquaVerse) in Flutter with Flame.
- Automated tests with xUnit and flutter_test.

C# · ASP.NET Core · Flutter · Flame · SQLite · EF Core · xUnit

The Upper Room — Church community marketplace

CLIENT · LIVE

Sole developer · Design and build

- Multi-vendor marketplace for church-member businesses, with customer, seller and admin dashboards.
- Shop search and filters, cart and demo checkout, a 3-step seller application, and seller stock, orders, earnings and payouts.
- Zero-dependency Node.js server for deep links; deployed live on GitHub Pages.

HTML5 · CSS3 · JavaScript · Node.js · GitHub Pages

siya23-maker.github.io/uppperroom

Stacey
A personal, conversational companion connected to Impilo.

Savora
A budgeting app to plan a budget, track spending and see where money goes.

Church Bible app
A reading plan customised for my church, so members read together.

What I bring to a remote team

01 Full-stack ownership
From Flutter and React screens to Node.js and .NET APIs and the database, I can take a feature end to end.

02 Leadership and planning
Led the Reggy team: scoped features, split the work and kept the front and back end moving together.

03 Quality by default
Automated tests with Jest, Vitest, xUnit and Newman, plus CI on GitHub Actions.

04 Remote-ready
Available immediately, flexible hours, comfortable working across time zones with Git-based workflows.

How I work

I break a requirement into small pieces, build and test each one, then move to the next. As a lead developer I enjoy the planning side as much as the code: scoping features, agreeing API contracts early and keeping a project on track to deadline. I take feedback openly and want to grow inside a team through code reviews and real production work.

Education

Bachelor's degree in Computer Science and Application Development
Emeris, South Africa
Final year
IN PROGRESS

Higher Certificate in Mobile Application and Web Development
IIE Varsity College
Awarded 31 December 2023
WITH DISTINCTION

Certification

Generic Management Level 4
SpecCon Holdings · Learnership
Completed 30 September 2024

Beyond code

Ironman finisher
Trained for and completed a full Ironman. The same discipline and stamina go into my work.

- Gym and strength training
- Reading
